Addressable

POE Enabled Control Module

Model : PAIPICNM901

Datasheet

http://www.pinetreesystems.com

Outline

PoE-Based Control Module provides a reliable and intelligent interface for controlling external devices and notification appliances through supervised wiring circuits. It supports seamless integration with a wide range of notification devices, including horns, sirens, strobes, and other alarm signalling equipment.

The module can be remotely activated or deactivated through commands from the central control panel or compatible applications and communication protocols, offering flexible control and efficient system management.

Designed for seamless integration into IP-based fire alarm and safety networks, the module enhances system flexibility, simplifies installation, and enables centralized control of connected devices.

Technical Specification

Product Class	: IP Based - POE - Addressable
Power Supply	: POE
Housing	: ABS
Type	: Resettable
Alarm Output	: RED LED
Operating Temperature	: -10°C to +55°C
Operating Humidity	: <95% Non Condensed
Addressing Method	: Electronic
Connectivity	: RJ45
Network Protocol	: UDP
Configuration	: Web-Based
