Addressable

POE Enabled Monitor Module

Model : PAIPIMN901

Datasheet

http://www.pinetreesystems.com

Outline

POE based Addressable Input/Monitor Module is a POE-powered device designed for the purpose of monitoring the status of external devices with dry contacts such as flow switches, temperature sensor, beam detector, flame detector, manual call point etc. The devices utilize the network to broadcast the alarm data to the Network Alarm Control Panel.

Each device is uniquely identified through an electronic ID, facilitating rapid response times from emergency personnel, and is fully compatible with a wide spectrum of devices within its ecosystem.

Technical Specification

Product Class	: IP Based - POE - Addressable
Power Supply	: POE
Housing	: ABS
Type	: Resettable
Alarm Output	: RED LED
Operating Temperature	: -10°C to +55°C
Operating Humidity	: <95% Non Condensed
Addressing Method	: Electronic
Connectivity	: RJ45
Network Protocol	: UDP
Configuration	: Web-Based
