

# Network Emergency Call Point

Model: PTSECP-V1

## Outline

Network Emergency call point is combined with Network Emergency Station (NAS) and initiates an alarm, warning or silence signal to the connected Emergency Station (Sirens) across the network. User friendly web based interface allows configuring the IP settings and operation of the device.

This device can also be coupled with external devices through built-in external device monitor (optional) that monitors the status of the external devices.
